Top prize valued at $500!

HEALTH#
HACKATHON

The NextWave Health# Hackathon connects students across engineering, health, business, design and more to help clinicians and students create their innovative device, software or digital solution. Giving **you** the opportunity to kickstart new ideas

How it runs:

1 Collaborate with passionate clinicians to identify potential health-tech innovations from a clinical perspective, or work on a problem they face in their clinical practice.

2 Form cross-disciplinary teams with other Griffith students, bringing together engineers, designers, business students, and healthcare personnel to build a prototype solution

3 Showcase your work to a distinguished panel of judges for a chance to kickstart new start-up ideas.
